The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/586,825

Applicant(s)

PARK ET AL.

Examiner

QUN SHEN

Art Unit

2617

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 June 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,6-9 and 14-16 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,6-9 and 14-16 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 6/17/10 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftperson's Patent Drawing Review (PTO-945)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date 2/24/11
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

This communication is a non Final Action on the merits. Claims 1, 6-9, 14-16, after amendment, are currently pending and have been considered below.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in **Graham v. John Deere Co., 383 U.S. 1, 148 USPQ 459 (1966)**, that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows: (***See MPEP Ch. 2141***)

Determining the scope and contents of the prior art;
Ascertaining the differences between the prior art and the claims in issue;
Resolving the level of ordinary skill in the pertinent art; and
Evaluating evidence of secondary considerations for indicating obviousness or nonobviousness.

2. Claims 1 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA (Applicant Admitted Prior Art (hereinafter AAPA), in view of NPL,

“Challenges in Portable RF Transceiver Design”, IEEE Magazine, September 1996, pp 13-25, by Behzad Razavi (hereinafter Razavi).

As to claim 1, AAPA discloses a modulating apparatus of an on-channel repeater which receives the signal on one channel and distributes the signal on the same channel (AAPA: Figs 1-2; page 1, lines 24- 33 page 2, lines 7-17), comprising:

a baseband signal configuring means for configuring a baseband signal by combining an input field and a segment sync signal (AAPA: Fig 3: 310; page 3, lines 1-17);

a pilot adding means for adding a pilot signal to the baseband signal (AAPA: Fig 3: 320; page 3, lines 1-17);

an Up-sampling means for up-sampling the baseband signal with the pilot signal added thereto (AAPA: Fig 3: 330);

a filtering means for filtering the up-sampled baseband signal with the pilot signal added thereto, wherein the filtering means generates an in-phase (I) signal and a quadrature (Q) signal and performs filtration (AAPA: Fig 3: 340; page 3, lines 1-28); AAPA also discloses digital to analog converting means (Fig 3, 370) (also see Zehavi, US 5,414,728, a pertinent art of record not being cited that also teaches above features), but does not expressly disclose a first digital-to-analog converting means for converting the filtered in-phase (I) signal into a first analog signal; a second digital-to-analog converting means for converting the filtered quadrature (Q) signal into a second analog signal; a first radio frequency (RF) up-converting means for directly up-converting the first analog signal into a first RF signal; a second radio frequency (RF) up-converting means for directly up-converting the second analog signal into a second RF signal;

an adding means for adding the up-converted first and second analog signals.

Razavi, however, teaches portable RF transceiver design where I and Q signals are oversampled. Pass through digital to analog converters, direct up-converting both I and Q signals to RF frequency then sum them together (Razavi: Fig 15, pg 20-21 sub-section Overall System).

Therefore, consider AAPA and Razavi's teachings as a whole, it would have been obvious to one of the skill in the art at the time of invention to incorporate Razavi's direct conversion teachings to AAPA's apparatus as a complete RF modulator for the benefit of providing a cost efficient direct conversion (or zero-IF) RF transmitter, which is commonly used in wireless transceiver design.

As to claim 9, claim 9 is a method claim that is encompassed and necessitated by apparatus claim 1. Rejection of claim 1 is therefore incorporated herein (see analysis and rejection above).

3. Claims 6-8 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over AAPA, in view of Razavi and US 6,658,261 B1, Winters et al. (hereinafter Winters).

As to claim 6, AAPA as modified discloses the modulating apparatus as recited in claim 1 or 2 but does not disclose the filtering means includes an Equi-Ripple (ER) filter and uses a window method. Winters, however, teaches using Parks-McClellan optimal equiripple filter as a low pass filter with appropriate windowing type and length for improving wireless communication performance under fading environment (Winters: col

4, lines 25 – 37). Therefore, consider AAPA as modified and Winters teachings together, it would have been obvious to one of skill in the art at the time of invention to further modify AAPA as modified's modulation apparatus by incorporating Winters's teachings on equiripple filter and appropriate windowing response to improve the performance of wireless communication system with reduced group delay under fading environment.

As to claim 7, AAPA as modified discloses the modulating apparatus as recited in claim 1 or 2, wherein the filtering means includes an ER filter (see analysis of claim 6).

As to claim 8, AAPA as modified discloses the modulating apparatus as recited in claim 1 or 2, wherein the filtering means includes a square root raised cosine (SRRC) filter and uses a window method (AAPA: line 11, lines 29-34, pg 3. It would have been obvious to one of skill in the art to apply window method taught by Winters with SRRC filter, see claim 6 for motivation).

As to claims 14 – 16, the claims are rejected with the same reason set forth for claims 6-8, respectively (see analysis and rejections of claims 6-8 above).

Response to Arguments

Applicant's arguments are considered but moot in view of new ground(s) of rejection.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to QUN SHEN whose telephone number is (571)270-7927. The examiner can normally be reached on 9:30 am - 6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jinsong Hu can be reached on 571-272-3965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
